DETAILED ACTION

Information Disclosure Statement

1. The references cited in the Search Report filed 06/24/2004 have been considered.

Allowable Subject Matter

2. Claims 1-12 are allowed.

The following is an examiner's statement of reasons for allowance:

- a. Independent claims 1 and 7 both features of inputting at least the edge image and the defined center line of the profile extraction region and correcting the center line of the profile extraction region based on the inputted edge image; and inputting the profile extraction region whose center line is corrected and extracting a profile of the moving object in the inputted profile extraction region to detect the moving object. These features in combination with other features in claims 1 and 7, which are the broadest allowable claims, are not taught or suggested by the art of record.
 - b. Claims 2-6 are dependent upon claim 1.
 - c. Claims 8-12 are dependent upon claim 7.
3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. Sumi et al, ("Sumi") U.S. Patent No. 5,845,006, teaches detecting movement of objects through capturing stereoscopic images, extracting the edges from the stereoscopic images and selecting tracing points for object movement tracking. However, Sumi does not teach the distance image and center-line correction based on profile extraction of the edge image. See whole document.
- b. Hanawa, U.S. Patent No. 6,370,261 B1, teaches using stereoscopic image data to generate distance image through use of histogramming technique. However, Hanawa does not teach center-line correction. See whole document.
- c. Tabata, U.S. Patent No. 6,411,326 B1, teaches detecting object movement in stereo image through steps of edge image generating and pattern extracting. However Tabata does not teach other feature steps recited in the independent claims of this application.
